“Facility Level” Hazard Analysis Program within Management of Change

Ryan Morton

Anadarko Petroleum Corporation

Interpretation of SEMS rule’s “facility level” hazard analysis mandate leaves operators freedom to interpret and analyze best approaches to ensure operational and process safety hazards are under control. Last year’s MKOCPS presentation on Anadarko’s Facility Level Hazard Analysis (FLHA) Program outlined our approach and focus to adhere to regulation while focusing time and money on where we believe risk reduction is most important.

This paper intend’s to outline how Anadarko’s FLHA Program continues further into continuous operational and process safety risk management within Brownfield engineering projects such as subsea tie-backs, as well as, the everyday management of change process.
