

MOC Course Description

Management of Change (MOC)

1-Day Course

Instructor: Dr. Jack Chosnek

Program Content:

OSHA's Process Safety Management standard has identified Management of Change (MOC) as a key element in controlling the potential hazards in a chemical processing facility. MOC policies and procedures are designed to ensure that changes within chemical process plants do not result in unsafe operations. Nevertheless, MOC is still one of the most challenging elements of process safety.

The purpose of this course is to explain the concepts and practice of MOC and to present the basic elements necessary for developing, implementing, and maintaining an ongoing MOC program that will meet both plant operating needs and regulatory requirements. In addition to examples of existing MOC policies and lessons learned from related industries, the course will provide guidance to assist participants in implementing an effective MOC program at their respective facilities.

Upon completion of this course, participants should be able to develop a customized version of the MOC policies and procedures provided herein. Furthermore, participants shall also be well-versed in the practical aspects of maintaining an effective MOC program.

Day 1:

- ☑ Concepts
- ☑ Definitions and Basis for MOC
- ☑ Principles and examples
- ☑ Recognizing Change – Types of Changes
- ☑ Key elements of an MOC
- ☑ Managing Management of Change
- ☑ Design of an effective MOC system
- ☑ Demonstration of an electronic MOC system

Who Should Attend?

This course is designed for corporate safety officers, process safety, technical and operations managers, process engineers, and plant level chemical manufacturing management in all process industries.
